UFCInc

REQUIREMENTS

- **Email server with either POP, IMAP or Microsoft Exchange®**

- **Dedicated email server mailbox account and login credentials**

- **Quillix Server 4.2 or higher**

PART OF A COMPLETE SOLUTION

The true power of Quillix is released when it is combined with the entire suite of MuWave QSX modules. MuWave E-Mail Gateway, MuWave Forms Pro and MuWave Route can be combined into a powerful capture work-flow solution, allowing you to capture documents from the web, convert them to hidden-text PDF's, and save them into a document repository.

MORE INFORMATION AVAILABLE ONLINE AT WWW.UFCINC.COM

MuWave® Email Gateway QSX

MuWave® E-Mail Gateway is a Quillix server extension that monitors an email account and captures all of the message content into Quillix indexes. The information captured includes the subject, message body and all email attachments. Once the user submits the email it is sent to the Quillix® system for processing. Image attachments are automatically extracted and individual pages are separated. Rules and notifications can be configured throughout the entire email capture process.

MuWave® Email Gateway QSX supports IMAP, SMTP and MAPI - and therefore most mail server configurations. UFC's MuWave Script is also included with the product, allowing for complex operations to be performed on the email prior to submission into the Quillix system.
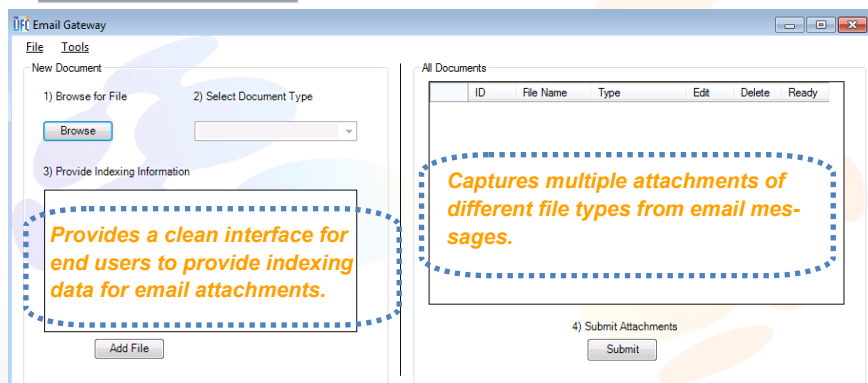

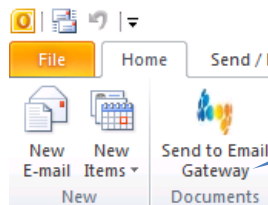

KEY FEATURES OF EMAIL GATEWAY INCLUDE:

- Captures multiple different file type attachments through the included Outlook® add-in

- Assigns incoming emails to Quillix users, based on email address or manual configuration

- Supports moving processed messages to a folder (IMAP only)

- PDF conversion option converts PDF attachments to TIFF or JPG

- Automatically determines Quillix batch profile and document type via Quillix indexes or scripts

- Advanced Visual Basic scripting through the integrated MuWave Script engine

- Automatic reply option to provide an acknowledgement of email processing

- Automatic conversion of HTML messages into MHT format - preserving attached images

- Flexible configuration allowing administrators to define rules based upon email addresses and attachments

NEW INNOVATIVE MICROSOFT OUTLOOK® ADD-IN!

The Outlook® add-in is easy to access from the ®Microsoft Office ribbon.

Provides a clean interface for end users to provide indexing data for email attachments.

Captures multiple attachments of different file types from email messages.
