MuWave® Rendition QSX is a Quillix™ Server extension (QSX) module which creates image files or PDF renditions from universal files, such as Microsoft Office® documents as well as HTML, email and PDF files. In addition, MuWave Rendition QSX can be used to standardize the dimensions of image files by altering the resolution (DPI) and bit depth, which is often a requirement for many downstream document processing applications such as OCR forms recognition and processing.

EASY SETUP AND CONFIGURATION:

MuWave Rendition QSX is quickly and easily installed on a running Quillix server, and requires minimal configuration before it is production ready. Simply add Rendition QSX to a Quillix batch or document workflow, configure the desired output settings, and activate the workflow. In many cases, the default settings provides the desired output, but are also easily adjusted through the intuitive GUI.
