

REQUIREMENTS

SERVER

- Server running Quillix 2.3 or higher

CLIENT

- Workstation running the Quillix Web client

MuWave® Web Import

DESCRIPTION

MuWave® Web Import is an add-in module for Quillix™ Web that provides high volume file import for the thin client capture stations. MuWave Web Import prevents users from having to display each file being imported in the browser.

KEY FEATURES INCLUDE;

- Provides high volume image and non-image file import
- Drag / drop support allows files to be dropped onto the web browser
- Supports all image file types as well as Microsoft® Office and other file types
- Multiple select feature allows large groups of files to be selected
- Provides a document separator sheet option for separating documents
- Implemented as a signed ActiveX control with server side ASP
- May be enabled or disabled by profile using an administrator web page

HIGH VOLUME - THIN CLIENT

Quillix Web is a powerful web-based capture product. MuWave Web Import enhances Quillix Web by allowing users to import high volumes of files without having to display each file in the browser as it is imported. The product supports image and non-image files such as Microsoft Office and PDF documents and provides a simple list view of the documents being imported with drag and drop support, allowing the user to simply drop a group of files onto the web browser.

A document separator feature allows users to click a button in order to insert a document separator sheet between the files in the batch. The Quillix server can use this barcode sheet to separate the documents. Individual files may be viewed in their native application by clicking the View File button. Once all required files are imported, the batch is released to the Quillix server just like any other Quillix Web batch.

SETUP AND CONFIGURATION

MuWave Web Import appears in Quillix Web like another capture source. When enabled, the end user simply selects the Web Import option from the list of capture sources and clicks the Scan / Capture button. MuWave Web Import may be enabled or disabled for each Quillix Web profile using the administration web page. All configuration settings are stored in an XML file on each Quillix Web server. This makes it possible to have different settings for each Quillix Web server.

Thin client web interface provides high volume import
